

BookLingua — Staff SOP

Internal use only. Last updated: 2026.

What is BookLingua?

BookLingua is an AI-powered book translation service. Authors upload a manuscript (EPUB, PDF, DOCX, or TXT), choose languages, and receive a translated file with editorial review within 2–3 hours. Every translation includes highlighted changes so the author can see exactly what was edited.

Live site: <https://booklingua.io> **Repo:** <https://github.com/teddyagsmith/BookLingua>
Support email: support@booklingua.io **Orders email:** orders@booklingua.io

Pages Overview

/ — Homepage / Order Flow

The main sales page and the entire ordering experience. Customers: 1. Upload their book 2. Set book details (title, genre, heat level for romance, special instructions) 3. Choose languages 4. Select upsells 5. Apply a voucher code 6. Pay via Stripe

/examples — Examples Page

Shows a real translation sample (Dracula excerpt) side-by-side with the original, with three tabs: - **Translation** — the translated text with changes highlighted in yellow - **Translation Notes** — editorial notes explaining key decisions - **Launch Strategy Pack** — sample of the launch strategy upsell

Use this page when selling to authors — it's your best proof of quality.

/publishers — Publishers Page

B2B landing page for publishers with 10+ books. Leads to a custom quote via hello@booklingua.io. No self-serve checkout — custom pricing only.

/success — Order Confirmation Page

Shown after successful Stripe payment. Confirms the order and explains the 3-step process (translation → editorial review → email delivery).

How an Order Works (Technical Flow)

1. **Upload** — File goes to `/api/upload` → stored in Supabase Storage
2. **Checkout** — `/api/checkout` validates the order, applies bundle discounts + voucher, creates a Stripe Checkout session
3. **Payment** — Customer pays on Stripe-hosted page
4. **Webhook** — Stripe fires event to `/api/webhook` → triggers Inngest job
5. **Translation** — Inngest runs the translation job (`/lib/translate-job.ts`):
Pass 1 (Claude Sonnet, full translation) → Pass 2 (Claude Opus, editorial review)
6. **Delivery** — Translated file + Translation Notes emailed to customer via Resend from `orders@booklingua.io`
7. **Download** — Customer gets a time-limited download link via `/api/download/[orderId]/[lang]`

Languages Available

Code	Language	Market
es-es	Spanish (Spain)	Castilian
es-latam	Spanish (Latin America)	Mexico, Colombia, Argentina+
fr	French	300M+ speakers
de	German	100M+ speakers
pt-pt	Portuguese (Portugal)	European
pt-br	Portuguese (Brazil)	215M speakers

Pricing

Tier	Word Count	Price per Language
Short	Up to 40k words	\$99
Standard	Up to 80k words	\$149
Large	Up to 150k words	\$199

Bundle Discounts (auto-applied)

Languages	Discount
1	0%

Languages	Discount
2	12%
3	25%
4	30%
5	35%
All 6	40%

Upsells

Launch Strategy Pack — \$29 (1 language) / \$49 (2+ languages)

A detailed PDF guide for launching a translated book on Amazon in a new market. Covers keyword research, category selection, pricing strategy, and launch timing. Generated automatically per language.

MRR Romance Shoutout — \$69 (Romance genre only)

A promotional shoutout to the My Romance Reads email list (~18K readers). Only appears when the customer selects Romance or Erotica as their genre. Coordinate timing with Clare.

Discount / Voucher Codes

Codes are entered at checkout. They stack on top of bundle discounts.

Code	Type	Value	Use Case
LAUNCH20	% off	20%	General launch promotion
FIRST50	Fixed	\$50 off	First-order incentive
FRIEND10	% off	10%	Referral / word of mouth
AUTHOR25	% off	25%	Author community / partnerships
BETA95	% off	95%	Beta tester access
TESTDRIVE	% off	95%	Internal testing only — do not share publicly

How to Add / Change Codes

Edit these two files (codes must match in both): - `app/api/validate-voucher/route.ts` - `app/api/checkout/route.ts`

Each code supports optional `maxUses` and `expiresAt` fields if you want to limit use.

Email Setup (Resend)

All transactional emails send from `orders@booklingua.io` via Resend. - Domain verified:  `booklingua.io` - **Order confirmation** — sent on successful payment (webhook) - **Translation complete** — sent when files are ready (`translate-job.ts`)

To view sent emails, log in to resend.com.

Stripe

- Live mode: 
 - Webhook endpoint: `https://booklingua.io/api/webhook`
 - To view orders: dashboard.stripe.com
-

Inngest (Background Jobs)

Inngest runs the translation pipeline in the background after payment. - Dashboard: app.inngest.com - App endpoint: `https://booklingua.io/api/inngest` - If a translation fails, check the Inngest dashboard for the error log and retry from there.

Supabase

Stores uploaded files and order data. - Dashboard: supabase.com - Schema: see `supabase-schema.sql` in the repo

Deployment

The site auto-deploys to Vercel on every push to main. - Vercel dashboard: vercel.com - Manual deploy: `VERCEL_TOKEN=<token> npx vercel --prod --yes`

Common Support Scenarios

“I didn’t get my email” Check Resend logs. Confirm the email address. Ask them to check spam. Resend manually from Resend dashboard if needed.

“My translation looks wrong” Ask them to forward the file. Check the Inngest job logs for errors. Offer a re-run or refund depending on the issue.

“I want a refund” Policy: Full refund if translation hasn’t started. Partial/goodwill if already translated. Contact support@booklingua.io.

“I need a custom quote for multiple books” Direct to the [/publishers](#) page or email hello@booklingua.io.
